

Seven

7

The **Seven** hook is the result of a long reflection aimed at improve the performance of our products on difficult environments and optimize the safety of all.

The system of automatic closing of the hook proposes an increased security taking into account several problems:

- To compensate for the possible unanticipated failures of a damaged, pinched cable.
- Allocate the rotating falls on the cable with the division of the strands of the cable.
- The seven has the ability to lock in case of fall and reopen automatically to continue the course. It is also equipped with a quick evacuation system.

"V" of wear, interchangeable. High resistance

Anti-shock hull protects the hook

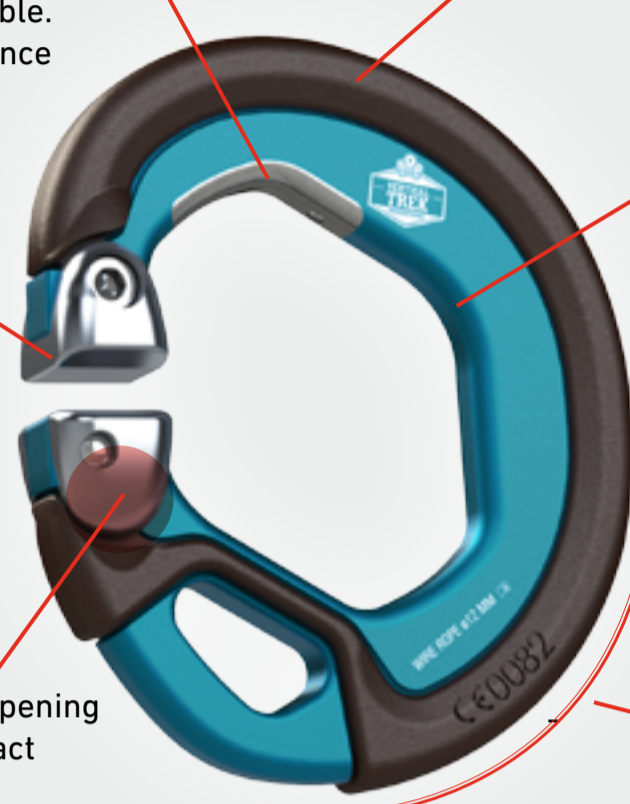

Special Via Ferrata

Unlockable, Quick Evacuation

Self-closing hook

Automatic reopening after impact

Ultra Light

But also

- Breaking strength: **23 KN** vertical and **16 KN** horizontal.
- Body hook protected by a shock absorbing shell.
- Increased durability with the use of the "V" of wear on the friction part with the Martensitic stainless steel cable + Treatment.

Made in France : The entire hook is made in France in the Pyrenees, with the help of the Aerospace sector and the Aquitaine Region

The seven is in "test phase" on ten parks and will be available from October 2017. We test it in the most demanding parks (High frequentation, sand, rock, tropics ...). It will also be available for testing for parks equipped with the system, on request.

The new website is available:
www.vertvoltageinnovation.com
www.verticaltrek.com
 Also in mobile version and still multilingual.

BONUS VIDEOS

PARTS

The packs have evolved and nomenclature present in catalogs also. A PDF is available on request.

NEW PACK 2

A new pack 2 replaces the old one, the refined sides and a reduced set for the same performances.

The Mac 4 remains in the catalog to replace the cable clamps on the ACB6-6 plate.
